33 chapters

The Evolutionary Epic: Science's Story and Humanity's Response - Its essays take you from the struggles of our hominid ancestors on the savannahs of Africa to a mountain climber's evolutionary epiphany on the snow-capped heights of a stratovolcano, from the mysteries of the quantum world, to the vast reaches of the universe. Begin with a story of humanity's evolution from primeval stardust to planetary stardom. Then explore the emergence of the epic through scientific research and wonder. View the multi-faceted story through unexpected lenses and follow it as it engages education, becoming a vital part of the enlightenment of young minds. Finally, experience the epic as it shifts our scientific and cultural paradigms, serves our quest for a brighter future, & enriches humanity's imaginative & spiritual dimensions. Includes an essay on Cosmology and Environmentalism by Brian Swimme. Foreword by David Christian

A 215 pg, hardbound book
by Dr. Russell Genet

Humanity: The Chimpanzees Who Would Be Ants - A science-based story of how, in a remote corner of an ordinary galaxy 13.7 billion years after the Big Bang, the descendants of a third line of chimpanzees evolved into millions of humans who organized themselves into ant-like societies. Originally rare hunters, we humans took up agricultural ways, aping the clever ants that became numerous by developing ingenious herding and gardening skills. Evolving our simple chimp tools into machines, we then tapped a bonanza of fossil fuel energy and blitzkrieged the planet. Now facing planetary limits, what is our fate? Reversing direction, will we return to a planetary Garden of Eden or, pedal to the metal, crash into oblivion? Will we transform the Earth into a sustainable global farm or, leaving our birth-planet behind, voyage to the stars with our machine partners to establish a galactic empire? A story of how we came to be & where we might be going. Foreword by Pete Richerson

A 406 pg, hardbound book

The Evolution of Religion: Theories, Studies, and Critiques is a unique transdisciplinary edited volume that gathers the latest research, debates, and programmatic visions of scholars studying religion from an evolutionary perspective. Anyone interested in the relationship of evolutionary science to religion will find insight and inspiration in this striking collection of fifty short essays from a diverse group of renowned international scholars. Here, God meets Darwin, and the conversation that ensues provides fascinating reading for those seeking to make sense of religion's place in nature. Introduction by Richard Sosis and Joseph Bulbulia. 50 chapters
