Foreword by David Christian

These essays take you from the struggles of our primitive ancestors on the savannahs of Africa to a mountain climber's evolutionary epiphany on the snow-capped heights of a stratovolcano in Mexico. Thirty-four chapters and forty-seven authors lead you to explore the mysteries of the quantum world and the vast reaches of the universe.

Begin with a simple, fire-side story of humanity's evolution from primeval stardust to planetary stardom. Then explore the emergence of the evolutionary epic through scientific research and wonder. View the multi-faceted epic through unexpected lenses and follow it as it is adapted into education and Big History as a vital part of the enlightenment of young minds. Finally, experience the story as it shifts our scientific and cultural paradigms, serves our quest for a brighter future, and enriches humanity's imaginative and spiritual dimensions.
